BY THE NUMBERS

485 commits	**46** repositories
73 tickets delivered	**16** repos security-patched

SKILLS

Languages

TypeScript · JavaScript · Python · Go · Swift

Front end

React · Redux · Vanilla Extract · HTML · CSS · Cypress

Back end

Node.js · Fastify · Django · REST · OAuth · OpenAPI · Typebox · WebSockets

Data / infra

MySQL · SQLite · Redis · Kafka · Docker · Helm · CI/CD · Algolia

Quality

Jest · Cypress · SonarQube · CVE and SOC remediation

AI tooling

Claude Code · Agent docs

EDUCATION

Kood/Jõhvi
Software and Application Development
Sep 2023 – Apr 2025

Taras Shevchenko National University of Kyiv
BS, Information Systems and Technologies, with honours
Sep 2020 – May 2024

LANGUAGES

Ukrainian native
Russian native
English upper-intermediate
Estonian A1

PROFILE

Full-stack engineer with React/TypeScript front ends and Node.js/Fastify back ends, plus Go and Python from a two-year programme. I ship steadily across a large service estate and write the design down before the code.

EXPERIENCE

Junior Software Engineer, Pipedrive — Gravity tribe

Jul 2025 – Dec 2026 · Tallinn

- **Sandbox plugin rebuild.** Migrated a 25+ module JavaScript backoffice plugin to TypeScript in 20+ batched commits, moved it to a bundler with containerless deployment, extracted a standalone Fastify backend and added broad unit-test coverage.
- **MCP announcement cards.** Delivered end to end across six services (UI, card service, trigger manager, OAuth API, legacy OAuth API, data warehouse), including a company-has-MCP-installed check with dynamic client registration detection.
- **Grouped MCP clients.** Grouped dynamically registered apps by redirect-URI domain in installed-apps lists, memoised and covered with Cypress.
- **Multi-region client-secret cache** with tombstone invalidation in the marketplace API, built from a written design spec and implementation plan.
- **Marketplace features.** SEO pagination via a shared React component, Algolia instant search, a double-submit-safe app review modal, uninstall-flow refactor, GitHub-flavoured Markdown, i18n for catalog labels, rating-score caching.
- **Security.** Cleared CVE and SOC findings in 16 repositories and moved services to Node 24.
- **Docs and enablement.** 20+ developer tutorials and the tribe's documentation set for AI coding agents; refreshed README and CLAUDE.md across services.

Software Engineer Intern, Pipedrive

Apr 2025 – Jun 2025

- Extended the backoffice API so departments and people can be tracked in internal missions.

SELECTED PROJECTS

Real-time Forum

Kood/Jõhvi · Go, SQLite, JavaScript, WebSockets, Docker

Single-page forum with login by nickname or email, posts, categories, comments and private messaging with history over WebSockets; throttling and debouncing for responsiveness.

View on GitHub

Service Request Platform

Kood/Jõhvi · Python, Django, HTML, CSS

Platform where customers request services and companies offer them, with profiles, real-time updates, cost calculation and request history.
